DETAILED ACTION

Status of the Claims

Claims 29, 49 and 50 are pending in the instant application.

Rejections Overcome by Amendment

The rejection of claim 29 for failure to adequately describe the invention under 35 U.S.C. § 112, first paragraph, is withdrawn in view of Applicants' amendment.

Reasons for Allowance

In view of Applicants' amendments to the claims, claims 29, 49 and 50 are found allowable. Applicants have replaced the limitation "compounds that decrease calcium influx of neuronal cells caused by aggregated β -amyloid ($A\beta$) protein degradation products" with "non-NMDA channel antagonists." It is well-known and recognized that non-NMDA channel antagonists are generally a group of three receptors, two of which are usually grouped together themselves: 1) the AMPA and kainite receptors; and 2) the metabotropic glutamate receptors. For a review on this class of receptor proteins, see Honore *et al.*, *Molecular Neuropharmacology* 2:61-64 (1992). Based on a review of the related and relevant prior art, there is no teaching of compositions comprising DAPH1 and a non-NMDA channel antagonist, nor any reasons to combine such compounds into a single composition.

Conclusions

Claims 29, 49 and 50 are allowed.
